

Proposed Green Manufactured and Modular Home Community

<http://www.5starhomes.com>

Have you heard about the "Totally Green Alberta" project? It is a newly proposed Manufactured and Modular Home community near Calgary, Alberta. The project is an environmentally responsible affordable living initiative, offering country living, wind and solar powered energy, recycling and waste management, water recycling and waste water processing. It even includes compost processing all packaged in a desirable community atmosphere.

5 Star Homes has no affiliation with this project and this is not an investment opportunity. We just thought it was interesting as it relates to the environmentally friendly aspects of manufactured housing and wanted to share it.
